SHOW

18-19 October 2023 • ExCel London

Why Do I need a Specialist Systems Integrator for a Digital Transformation project?

Dave Lister – Managing Director
IAconnects Technology Ltd
E- dl@iaconnects.co.uk

Typical Project team (Simplified)

IT

Connectivity
Gatekeeper

OT

Make things work
Department

Stakeholder

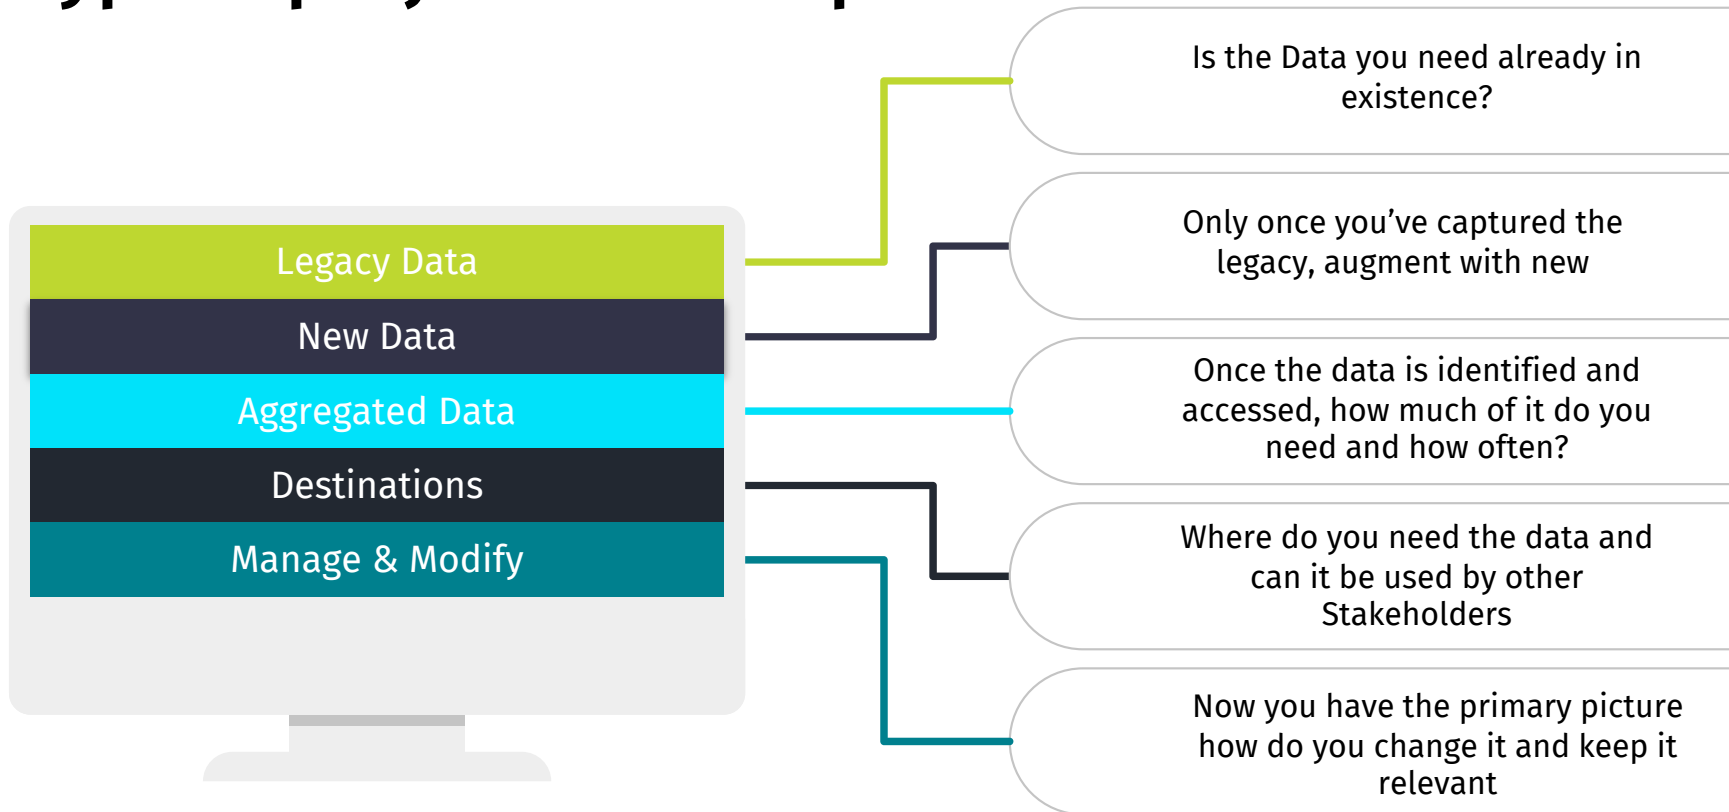

This was my idea!
(usually until it
doesn't work)

CFO

Do some more or
stop right now
Department

Typical project landscape?

IAC Project Example!

The key players

Client

Local Authority

Delivery Vehicle

Mid-size Main Contractor & Sub-contractor supply chain for M&E

Consultant

Forward thinking consultant pushing the Smart Agenda

IT

IT delivery Team
Client IT Team
Tenant IT Team

OT

M&E Delivery
Feeding FM & Client specialists

IConnects

Joining the Dots?

The Project!

Monitoring

Bought & Generated Energy
& BMS performance

BMS Data Points

Circa 350 Data Points
in a Trend BMS

Expansion ready

Footprint for a rollout
across new/legacy

Occupancy

Low-level understanding
of usage

Alarm patterns

Repeat offenders

Multiple stakeholders

Management,
Tenant, FM, Energy

Why so difficult?

1

The BMS

Accessing 350+ specific Data points in Trend and surfacing those to a middleware platform

2

Occupancy

No allocated budget, data derived from Zen Control LCS platform

3

Energy

PV & Air Source systems data surfaced and shared to the aggregation layer

4

Fault monitoring

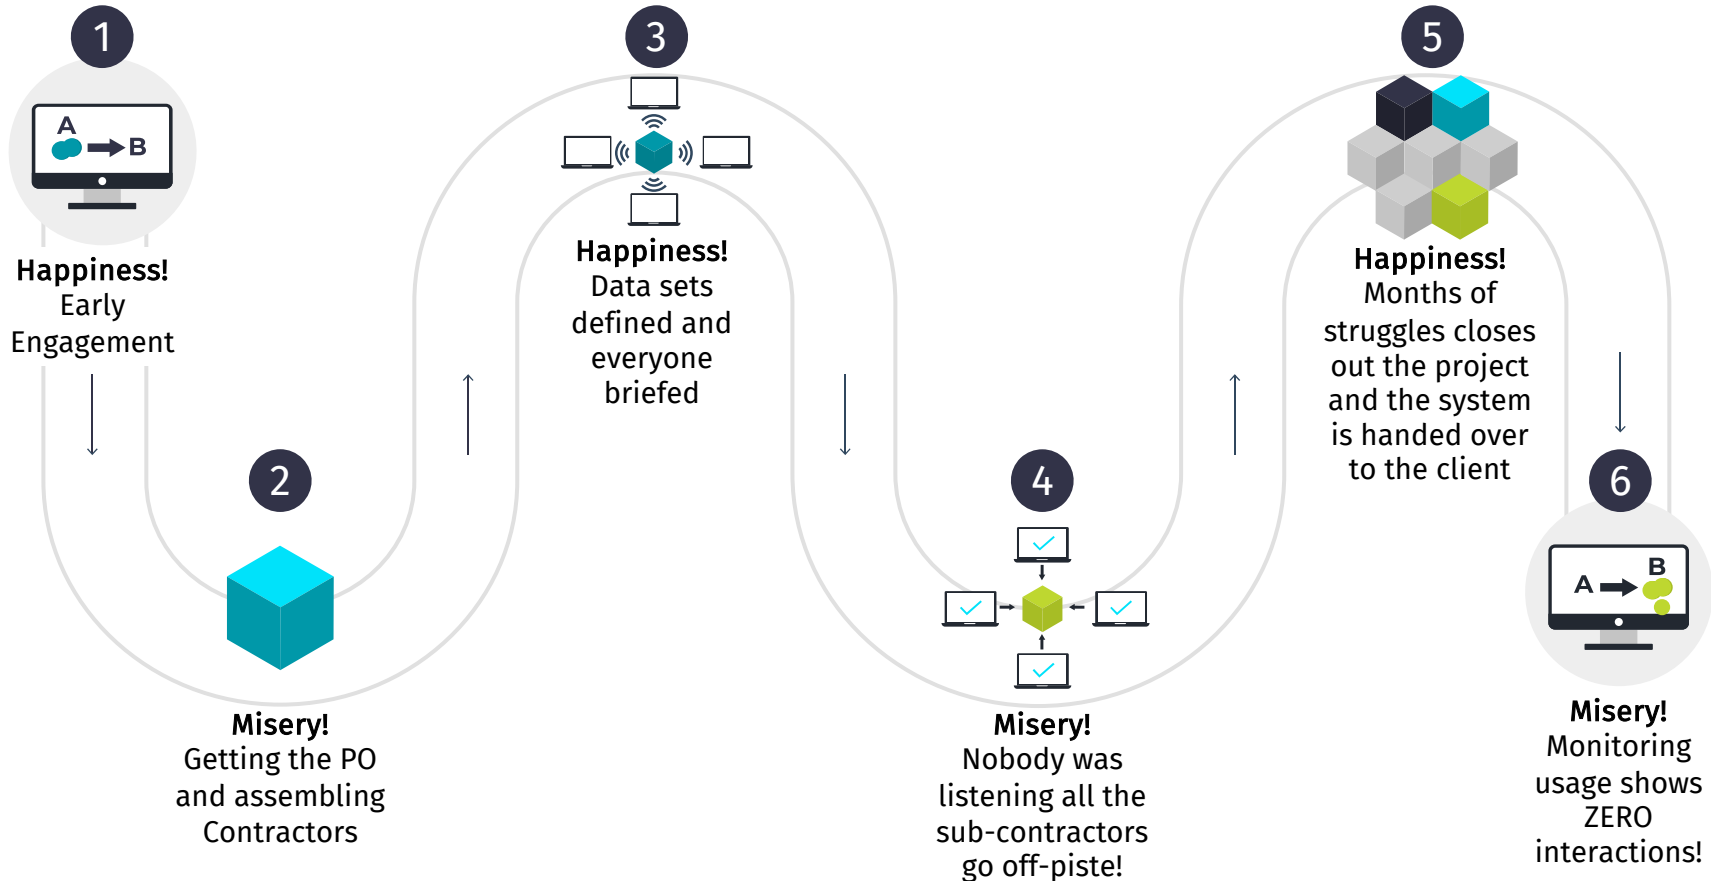

Look for repeated faults and alerts in flexible time-frames then share based on criticality

5

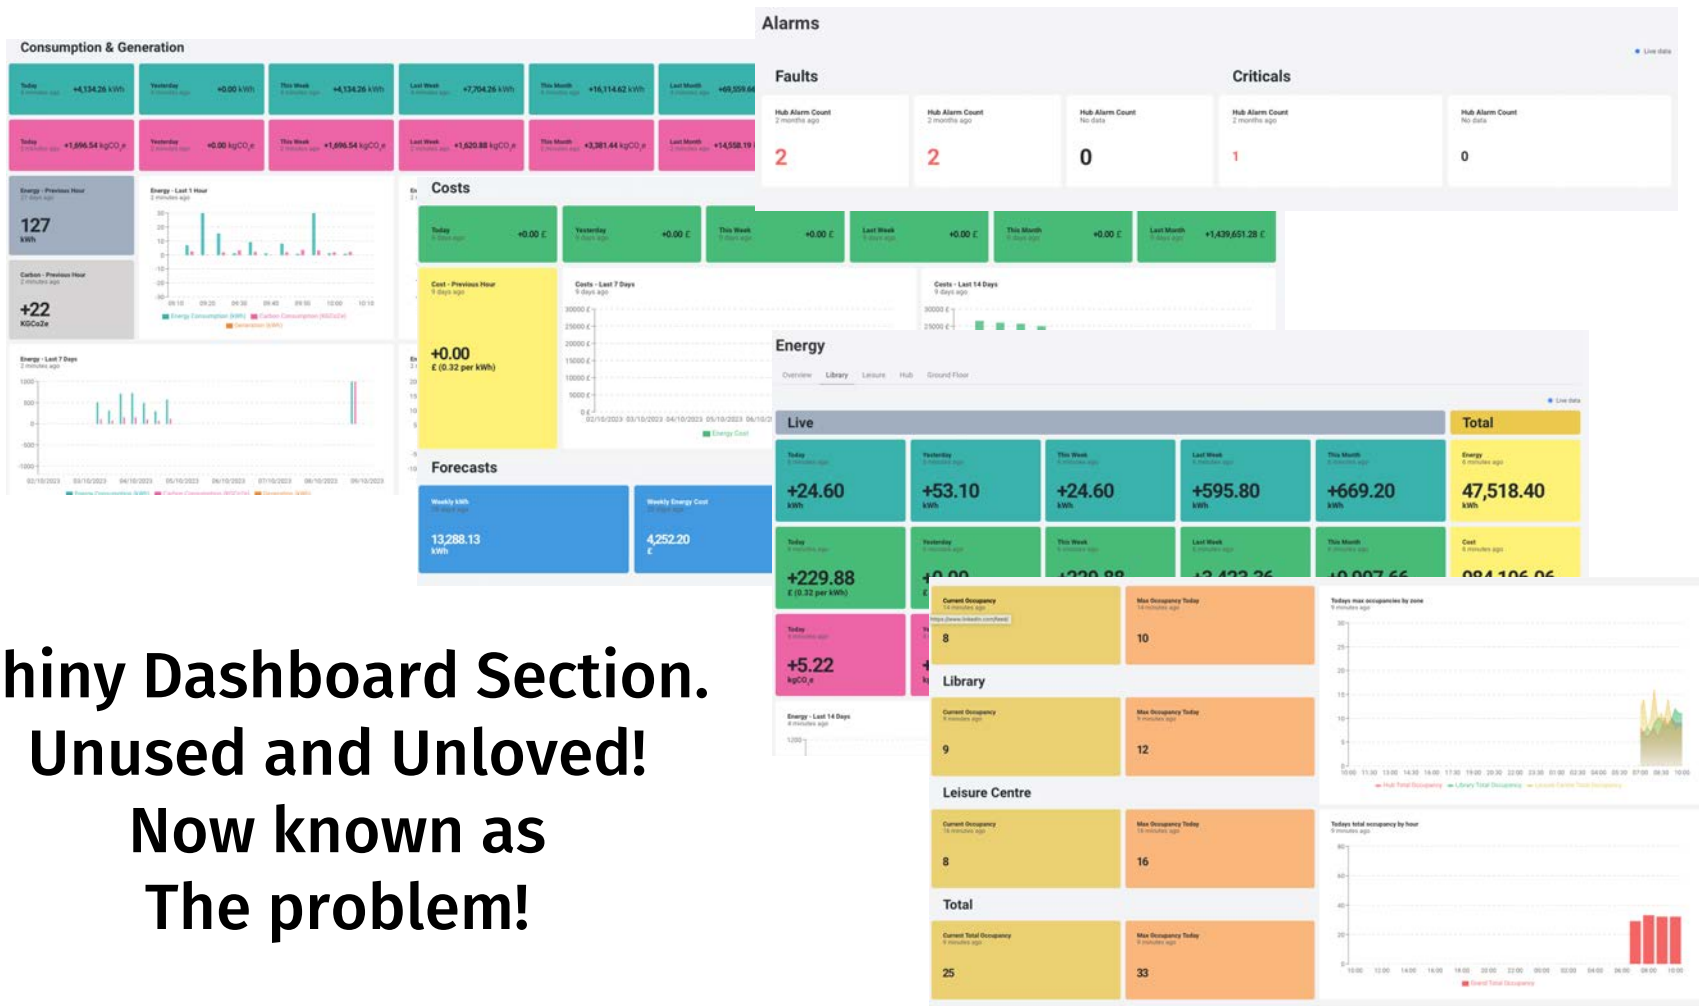

Data sitting on 3 Networks

Client - Tenants – 3rd party FM

The Project Journey so far!

Shiny Dashboard Section.
Unused and Unloved!
Now known as
The problem!

The Dream!

The reality!

Stakeholders

Zero interaction to date!

Negative ROI

Zero Interactions =
Zero Benefits

Exemplar

If it was great I
wouldn't be using it
here!

On-time

Late & over Budget.
M&E forces additions

Rollout

Not yet!

Building

It works, but could it be
better?

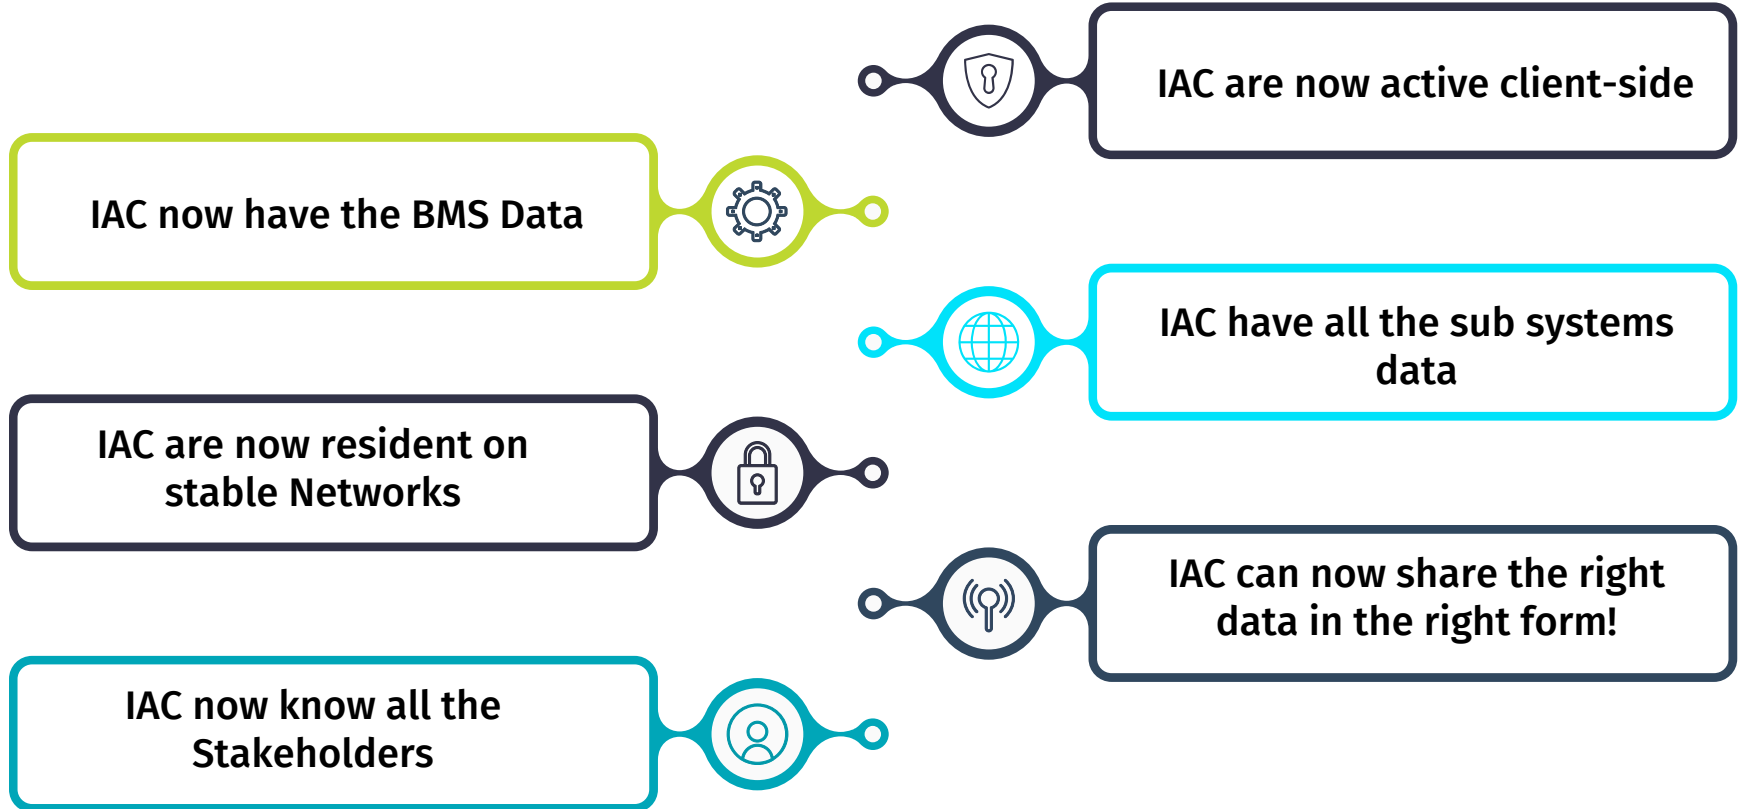

**So Dave,
didn't you just demonstrate project failure?**

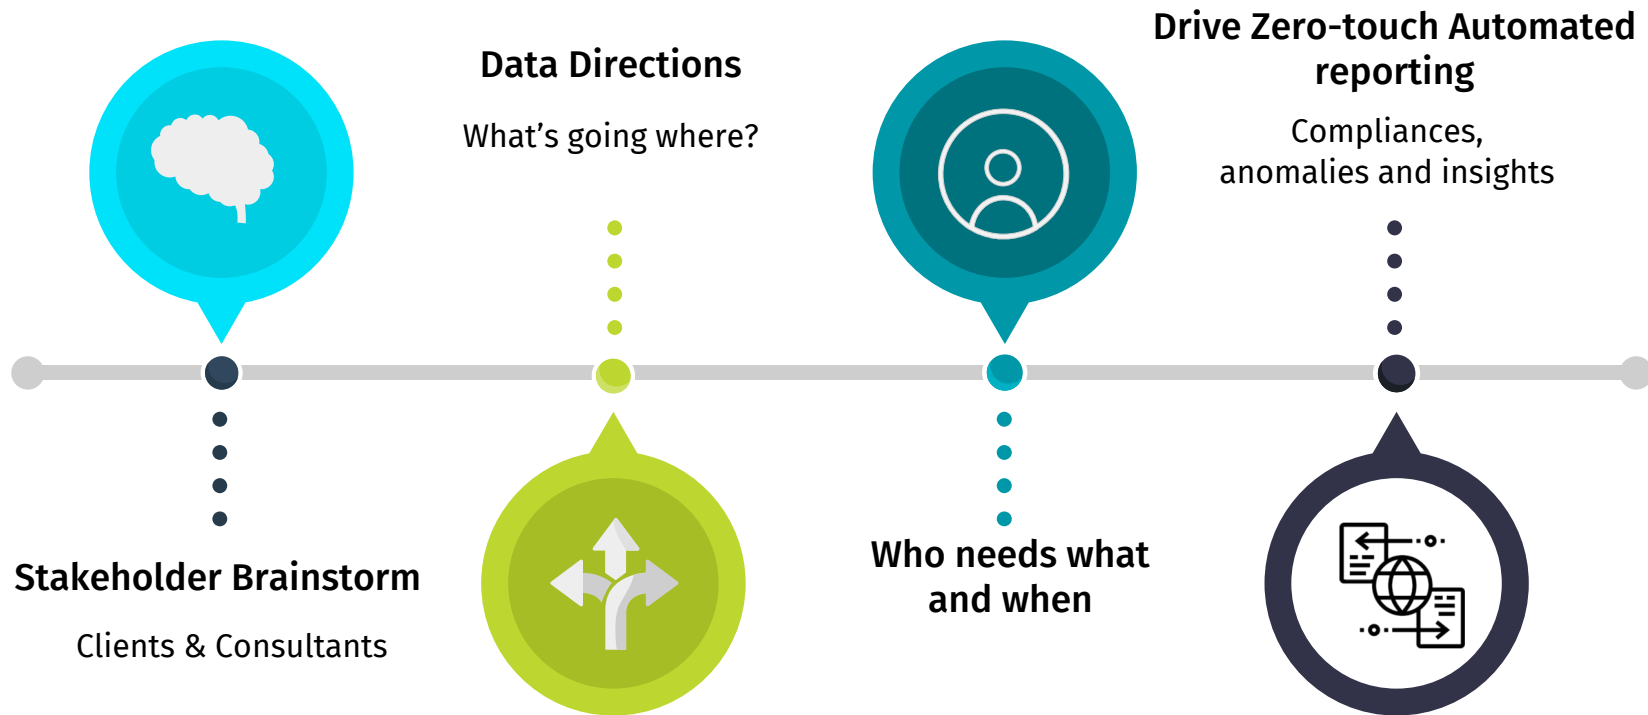

I did!

Snatching Victory from the Jaws of defeat!

The next steps!

The Now!
**Not looking
is the
future!**

Finance & Usage

Past, current & predicted

Carbon

Past, current & predicted KgCo2e

Maintenance

Repeated faults and critical alarms are recorded and shared

Active System Monitoring

All connected devices are now monitored by IAC systems

What we preach!

1

Early engagement

MUST be
across all
stakeholders

2

Buy Specialist advice

Consultancy needs to
be challenged

3

Challenge everything

Don't fear the
awkward questions

4

Automate answers

Minimising
human lead
interventions

5

Budget for change

What you originally
thought is invariably
wrong. Be ready!

Finally – Some Stats....

Which is why we think you need specialist Systems Integrators!

Thank you and Questions?
