SHOW

18-19 October 2023 • ExCel London

YOUR PATH TO NET ZERO

Technology/Software-led roadmap to decarbonization in building operations

ABOUT THE HOST

AI-driven Property Operations Software Platform for Real Estate Portfolios

backed by

Accel

TIGERGLOBAL

Brookfield

› Global company **HQ-ed in New York** with offices in Dubai, Chennai (India), UK, Australia, and Singapore.

› **Enterprise clients** across real estate verticals —Office, Retail, Higher-ed, Healthcare, Service Providers

› **50+ Global partners**—OEMs, SIs, ISVs, Energy, Govt Bodies

› **Over 190+ employees** across global offices

Trusted by Enterprises Across 250+ million Sq.Ft

Office Owner/Operators

Brookfield

MOLONGLO

Other Categories

Large Grocers, C-store, & Retailers

Robert Dyas

THE ENERGY DUEL

Vehicles vs Buildings

25-30%

global energy consumption

25-30%

global carbon emissions

2010

2023

70%

40-50%

global energy consumption

30-40%

global carbon emissions

2010

2023

30%

Moving from energy management to carbon targets

Our focus today

Physical Retrofits

Heat Pumps

Electrification / Grid

Capital heavy

Time Consuming

Longer time-to-value

Dead-ends (single site level)

Decarbonization Opportunities

Technology & Data

Faster time-to-value

Low-hanging opportunity

Portfolio-wide gains

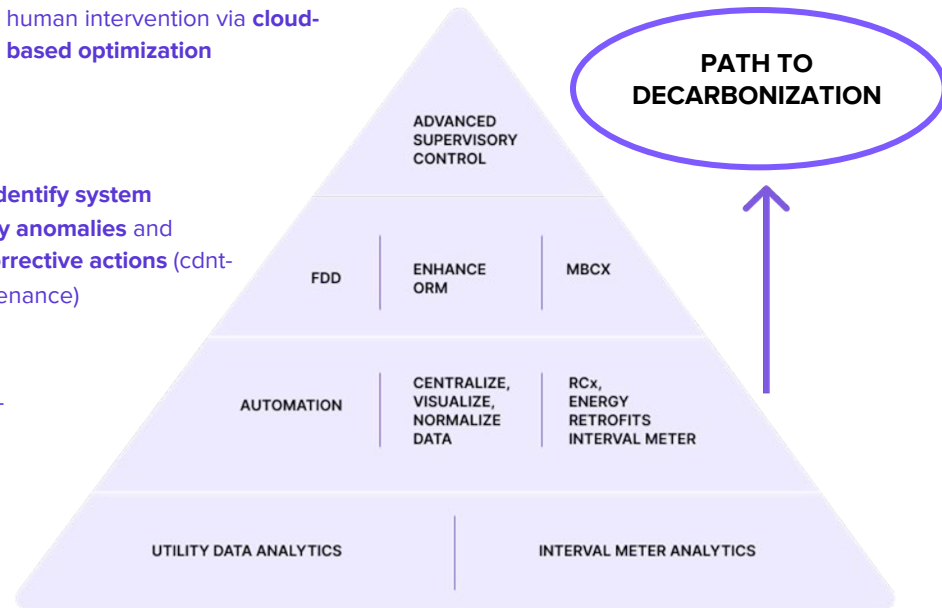

Enabling the most practical path to net-zero targets with a unified, platform-based approach

Demand reduction through **benchmarking utility** data and metering - the first step to net zero

Open up BAS data, address system-level inefficiencies, **visualize portfolio-wide insights**—take stock of **all possible ECMs in one place**

Proactively **identify system faults/energy anomalies** and **automate corrective actions** (cdnt-based maintenance)

Close the efficiency loop without human intervention via **cloud-based optimization**

A strong tech foundation at Levels 1 and 2 are foundational to see success with Levels 3 and 4

Optimize portfolio performance in real-time and lower operating costs with Facilio's Connected Buildings Solution

Level 1

VISIBILITY & MONITORING

What can you achieve?

- Automated utility reporting
- Portfolio benchmarking
- Granular understanding of what's driving up cost
- Drill-down reports for internal audit/compliance

DATA REQUIRED: Historical utility data(spreadsheets), access to utility provider APIs

Level 2

ANALYTICS & INSIGHTS

What can you achieve?

- Equipment performance in real-time
- Heatmaps, regression, demand vs consumption
- Savings dashboard (site & asset-wise)
- FDD & potential for further savings

DATA REQUIRED: sub-meter/VM data, BMS data, available sensor data

Level 3

OPTIMIZATION

What can you achieve?

- Human-touch optimization: automated alarm to work order/low-effort maintenance task
- Cloud optimization: remote command and controls to optimize setpoint, schedules, sequences

DATA REQUIRED: BMS/BAS access + cloud platform (Facilio)

Two ways to take tech action towards carbon management

POINT SOLUTIONS

Fault Detection

Air Quality

Energy Management

- Redundant integration
- Data storage
- Multiple data models

- Inefficient/task switching
- Delayed results
- Dead-ends/more complexity

PLATFORM APPROACH

applications

cloud platform

workflows analytics identity mobile UI
data models db/storage out-of-box integrations API

iot edge

- Common data infrastructure
- Integration with existing business systems

- Clear path to net-zero
- Future-proofed for new use cases

Connected Buildings—modular, start-to-scale

Level 1 – Visibility & Monitoring

Utility Tracking

Historical Bill Analysis
Bill Validation
Multi-tenant Billing
Energy budgeting

Portfolio Benchmarking

EUI (Energy Usage Index)
Consumption Analysis (portfolio,
site-level, asset-level)
Building Score

ESG Reporting

Emissions calculation
Emissions reporting
Benchmarking [Energy Star /
NABER Scoring]

Level 2 – Analytics & insights

Monitoring

Sub-meter/VM/interval data Real-
time consumption monitoring
(portfolio, site, floor, asset level)
Indoor Air Quality, CO2 emissions

Analytics & Dashboard

Demand vs consumption
Regression analysis
Load curves, Heatmaps
Operating/non-operating hours

FDD

On cloud, Unified fault/alarm view
Cost impact, Root Cause Analysis
Predictive analytics, Smart filtering,
Correlation

Level 3 – Optimization

Alarm to Work Order

Alarm to Automated Work Order
Corrective workflow / Customizable Pre-
configured Templates
Scheduled workflows

Cloud Based Optimization

Cloud command and control
Optimize for occupancy, comfort, energy efficiency
Cloud-based set point, schedules, and sequences
configuration

Platform Capabilities

Facilio IoT Edge

real-time data acquisition from BMS/BAS systems

Workflows

Drag and drop workflow builder

FDD Engine

out-of-box rule library + custom rule builder

Common Data Model

Centralized and normalized data nomenclature

Analytics

out-of-box reports, time-series comparison

API

Integrate with existing business systems

Success Stories

How Facilio is changing the game for owner/operators with a unified, platform-based approach to net-zero.

Robert Dyas' Vision for Energy Efficiency

- To create a culture of using energy at work as you would at home
- To place ownership of energy consumption in the right hands
- To enjoy a reduction in our carbon emissions at the same time as reducing our costs

Challenges

- Installing smart meters
- Collecting & standardizing usage data
- Bringing physically distant teams on board
- Continued adoption

Impact & way forward

20% YOY

Reduction in energy
consumption

£600,000+

285 tonnes of Co2
saved & 1.4M kwh

£175,000

Potential further energy
savings & 500,000 kwh

What's next for Robert Dyas

To continue to embed energy saving culturally into the business by making 'Top Shops' more visible to drive competition.

To complete our LED roll out programme to optimise usage and reduce costs further.

Spread the word across other group companies & retailers to help on a collective journey towards net zero.

BritishLand Solution Summary

- Cloud overlay solution for portfolio wide analytics and optimization
- Connects automation controls (hvac, lighting, lifts, occupancy sensors, etc) application software (visitor, room booking, helpdesk, CaFM)
- 350+ FDD rules for asset lifecycle management

Challenges

- Occupancy based dynamic HVAC & lighting scheduling
- Automated daylight savings aligning indoor conditions, daylight, comfort
- FDD to isolate issues and improve MTTR
- Space insights for better planning (visitor data, behavior, conference room usage, help desk)

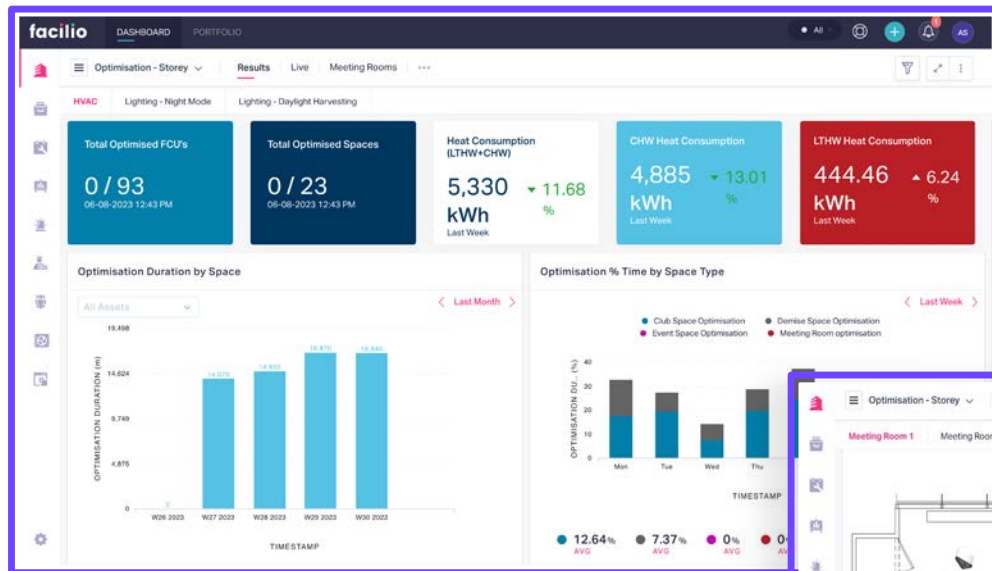

Impact & way forward

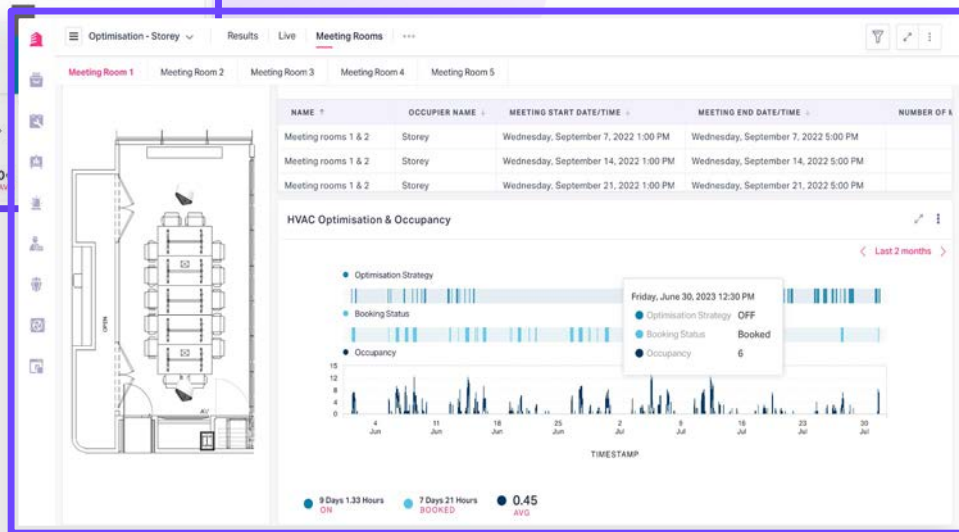

50% reduction
in Heating/Cooling
energy consumption

Optimized over 300,000
minutes of HVAC
operations in a month
(July '23)

Energy/cost savings via
optimizations
(occupancy based, not
in use etc)

Screens

Ian Pierce

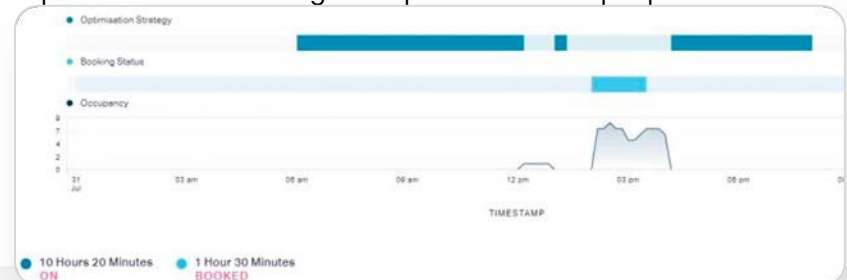

Senior product manager

July has just delivered us our greatest results so far in our efforts to reduce our energy consumption. As part of our HVAC Optimisation strategy through [British Land's](#) smart building platform, BL:Connected, we have been able to **reduce our Heating/Cooling Energy consumption by 50%, year on year** comparison, for our Storey_space at 100 Liverpool Street!

Through the 45,000 sq ft of space, we have delivered an **Optimisation Strategy that automatically alters the air conditioning operations** based on the demand of the space be it meeting rooms, desks, lounge areas and event spaces. To achieve this we've used technology to gather this understanding from Occupancy Sensors, Air Quality Sensors, access-controlled entries, Lighting PIR Sensors, and meeting room bookings. **For July alone, this has seen us optimise over 300,000 minutes of the air conditioning unit operations.** Another step forward in reducing our energy impact and automating the way we manage our spaces without affecting the experience for the people who use them.

Greener Spaces, Thriving Places, Responsible Choices.
